POSIMAT

THE **N** UNSCRAMBLER, OF THE ACCESS SERIES (see ACCESS brochure), IS THE UNSCRAMBLER WITH TRADITIONAL POSIMAT FORMAT CHANGE OF RAPID PLUG-IN AND PLUG-OUT SYSTEM (patented) WITHOUT THE NEED FOR TOOLS OR ADJUSTMENTS.

The format change is done in a simple way, just by unplugging the existing set of selecting pieces and funnels, and plugging in a new set of selecting pieces and funnels required for the new bottles to be unscrambled.

This operation is done without the need for tools or adjustment. Therefore, it is never necessary for the intervention of qualified

operators. Once the format change is complete, the machine is immediately ready to unscramble new bottles.

The majority of format changes can be easily made by line operators in a short period of time. The average is 30 seconds per selecting piece/funnel.
